HEAVY-DUTY CONVEYOR GUARD

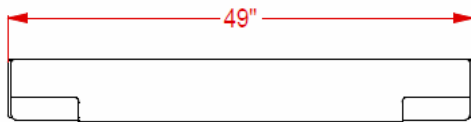

Stop spending time and money repairing damaged conveyors. Install STI heavy-duty guards at exposed conveyor locations and be done with this problem.

Guards are constructed with a $\frac{1}{2}$ " thick steel plate frame and covered with a $\frac{1}{4}$ " formed steel shield. Guards are firmly bolted to the floor with eight, $\frac{3}{4}$ " diameter steel lag bolts (included). These rugged units pay for themselves with each fork load handled.

Built-in pallet stop posts prevent loads from sliding off the rollers. Safety yellow powder coated with standard 2-week delivery.

Optional Features:

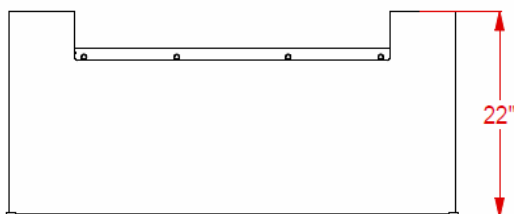

Smooth top for fork unloading zones.
Other colors available.
